PROJECT TITLE: Allen Ranch Medical Buildings Project (PLNG23-029)

PROJECT APPLICANT: Calpo Hom & Dong Architects, Inc.
Andy Kwong (Representative)
2120 20th Street, Suite One
Sacramento, CA 95818
(916)446-7741

PROJECT LOCATION: Elk Grove California, Sacramento County

ASSESSOR'S PARCEL NUMBER(S): 132-2150-008; 132-2150-009; 132-2150-010; 132-2150-011; 132-2150-021; and 132-2150-013

PROJECT DESCRIPTION: The Project consists of a Major Design Review for seven (7) medical office buildings along with associated site improvements including parking, lighting, and landscaping. The Applicant is also asking for approval of an alternate design to split one building into two smaller buildings within the footprint of the original building, which would increase the total number of buildings to eight (8). The total allowed building area would be ±65,710 square feet. The Project also includes a Tree Permit for the removal of trees of local importance.

This is to advise that on September 5, 2024, the City of Elk Grove Planning Commission has approved the above-described Project and has made the following determinations regarding the above-described project.

CEQA requires analysis of agency approvals of discretionary "projects." A "project," under CEQA, is defined as "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (State CEQA Guidelines Section 15378). The proposed Project is a project under CEQA.

No further environmental review is required under CEQA pursuant to State CEQA Guidelines 15162 (Subsequent EIRs and Negative Declarations). State CEQA Guidelines Section 15162 (Subsequent EIRs and Negative Declarations) provides that when an EIR has been certified for an adopted project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, that one or more of the following exists:

1. Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
3. New information of substantial importance, which was not known and could not have been known with exercise of reasonable diligence at the time of the previous EIR was certified as complete shows any of the following:
 - a. The project will have one or more significant effects not discussed in the previous EIR;
 - b. Significant effects previously examined will be substantially more severe than shown in the previous EIR;
 - c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
 - d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measures or alternative.

Staff has reviewed the Project, including the alternate design layout, and analyzed it based upon the above provisions in Section 15162 of the State CEQA Guidelines. The Project is being undertaken pursuant to and in conformity with the approved Laguna Ridge Specific Plan and Elk Grove General Plan as described below.

In 2003, the City Council certified an EIR for the Laguna Ridge Specific Plan (LRSP, State Clearinghouse No. 2000082139). The LRSP EIR analyzed full buildout of LRSP based upon the land plan, development standards, and policies contained in the General Plan and LRSP, as well as the improvements identified in the accompanying infrastructure master plans. The Project is consistent with the land use and development density assumed in the LRSP. The Project is subject to the LRSP Mitigation, Monitoring and Reporting Program (MMRP).

Additionally, staff finds that no further environmental review is required under State CEQA Guidelines Section 15183 (Consistency with a General Plan, Community Plan, or Zoning). State CEQA Guidelines Section 15183 (Public Resources Code §21083.3), provides that projects which are consistent with the development density established by an existing Community Plan, General Plan, or Zoning for which an environmental impact report (EIR) has been certified

"shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site." In February 2019, an EIR was prepared and certified by the City Council as part of the Elk Grove General Plan (SCH# 2017062058). The Project is subject to the General Plan MMRP. The Project will result in a Floor Area Ratio (FAR) of 0.26 (0.25 for the alternate building design), which is below the maximum FAR in the SC zone of 1.0. As the proposed uses are allowed and the proposed development intensity is below the maximum FAR, the proposed Project will be consistent with the General Plan. As the proposed Project includes allowed uses within the allowed density range, the proposed Project is consistent with the General Plan.

The General Plan EIR relies on Vehicle Miles Traveled (VMT) as a measure of transportation impacts. VMT Analysis was prepared for the Project by Fehr & Peers dated March 20, 2024. According to the Analysis, VMT land use designation limits as well as the City limit for total VMT at buildout conditions would not be exceeded. Additionally, the Project shall comply with the City's Climate Action Plan (CAP) for new non-residential development, including CAP measures related to energy efficiency (BE-4), solar readiness (BE-6), off-road construction fleet (TACM-8), Air Quality Mitigation Plan (TACM-3), and electric vehicle charging (TACM-9).

No potential new impacts related to the Project have been identified that would necessitate further environmental review beyond the impacts and issues already disclosed and analyzed in the LRSP and General Plan EIRs. No other special circumstances exist that would create a reasonable possibility that the Project will have a significant adverse effect on the environment. Therefore, the prior EIRs are sufficient to support the proposed action and pursuant to State CEQA Guidelines Sections 15162 and 15183, no further environmental review is required.

This is to certify that the Environmental Impact Reports are available to the General Public at:
